An account of Herbert Field's quest for a new way of organizing information and how information systems are

produced by ideology as well as technology. In *Information and Intrigue* Colin Burke tells the story of one man's plan to revolutionize the world's science information systems and how science itself became enmeshed with ideology and the institutions of modern liberalism. In the 1890s, the idealistic American

struggle to create and maintain his system, Field became entangled with nationalistic struggles over the control of science information, the new system of American philanthropy (powered by millionaires), the politics of an emerging American professional science, and in the efforts of another

World War I shuttered
the Concilium, and
postwar efforts to revive
it failed. Field himself
died in the influenza
epidemic of 1918.

Burke carries the story
into the next generation,
however, describing the

career of Field's son, Noel, who became a diplomat, an information source for Soviet intelligence (as was his friend Alger Hiss), a secret World War II informant for Allen Dulles, and a prisoner of Stalin.

Along the way, Burke touches on a range of topics, including the new entrepreneurial

Intelligence was a
central element of the
Cold War and the need
for it was expected to
diminish after the
USSR's collapse, yet in
recent years it has been
in greater demand than
ever. The atrocities of

11 September and the subsequent "war on terrorism" now call for an even more intensive effort. Important questions arise on how intelligence fits into the world of increased threats, globalization and expanded international action.

This volume contains the recent work on this subject by Michael

Herman, British intelligence professional for 35 years and Oxford University academic. It compares intelligence with other government information services, and discusses the British intelligence system and the case for its reform. It also addresses the ethical issues raised by intelligence's methods and results: "do they on

Other chapters explore a wide range of intelligence topics past and present, including the transatlantic relationship, the alliance strategies of Norway and New Zealand, Mrs Thatcher's "de-unionization" of British Sigint, and personal memories of the British

Cabinet Office in the 1970s. Michael Herman argues for intelligence professionalism as a contribution to international security and for its encouragement as a world standard. The modern challenge is for intelligence to support international cooperation in ways originally developed to

advance national interests, while at the same time developing some restraint and international "rules of the game", in the use of intrusive and covert methods on its traditional targets. The effects of 11 September on this challenge are discussed in a thoughtful afterword.

This book offers the first account of the foundation, organisation and activities of the NATO Information Service (NATIS) during the Cold War. During the Cold War, NATIS was pivotal in bringing national delegations together to discuss their security, information and intelligence concerns and, when

appropriate or possible, to devise a common response to the [Communist threat]. At the same time, NATIS liaised with bodies like the Atlantic Institute and the Bilderberg group in the attempt to promote a coordinated western response. The NATO archive material also shows that NATIS carried out its own

By focusing on the degree of cooperation on cultural and information activities, this analysis of NATIS also contributes to the history of NATO as a political alliance and

This is the first detailed study of Britain's open source intelligence (OSINT) operations during the Second World War, showing how accurate and influential OSINT could be and ultimately how those who analysed this intelligence would shape British post-war policy towards the Soviet Union. Following
