Internal combustion engine - Wikipedia

As the name implies or suggests, the internal combustion engines (briefly written as I.C. Engine) are those engines in which the combustion of fuel takes place inside the engine cylinder.. In other words, the internal combustion engines are those engines in which the combustion of fuel takes place inside the engine cylinder by a spark. These are petrol, diesel and gas engines.

(a) Spark ignition engine (S.I.Engine): In this type of engines, fuel is ignited by an electric spark generated by a spark plug. (b) Compression ignition engine (C.I. Engine): In this type of engines, the fuel gets ignited as it comes in contact with the hot compressed air. (iv) According to the cycle of combustion

Classification Of I.C. Engine - Learn Mechanical Engineering

The internal combustion engine is an engine in which the burning of a fuel occurs in a confined space called a combustion chamber. This exothermic reaction of a fuel with an oxidizer creates gases of high temperature and pressure, which are permitted to expand.
