The C programming language provides four other basic data types: float, double, char, and _Bool. A variable declared to be of type float can be used for storing floating-point numbers (values containing decimal places). The double type is the same as type float, only with roughly twice the precision.

Those APIs are themselves written mostly in C. There's more than one way to create a native desktop app: You can program using the Win32 APIs directly, using a C-style message loop that processes operating system events. Or, you can program using Microsoft Foundation Classes (MFC), a lightly object-oriented C++ library that wraps Win32. Neither approach is considered "modern" compared to the Universal Windows Platform (UWP), but both are still fully supported and have millions of lines of ...
