The Great Transition Climate Disease

A major new account of the fourteenth-century crisis when climate change, disease and a transformation of the military and political balance of power reshaped the medieval world. Bruce Campbell reveals how these factors combined in a devastating succession of famines, floods, human and animal mortality, wars and financial crises.

The Great Transition: Climate, Disease and Society in the ...

The new world that the Great Transition ushered in was colder, wetter, and more disease ridden than any humans had ever known before. Historians of the early modern period have recognized the climatic period known as the Little Ice Age (LIA) for some time. 1 For the history of medicine, no agreed-upon term has arisen for this regime of intense infectious diseases, which were in full global circulation after 1492.

The Great Transition: Climate, Disease and Society in the Late-Medieval World. Bruce M. S. Campbell. In the fourteenth century the Old World witnessed a series of profound and abrupt changes in the trajectory of long-established historical trends.

Transcontinental networks of exchange fractured and an era of economic contraction and demographic decline dawned from which Latin Christendom would not begin to emerge until its voyages of discovery at the end of the fifteenth century.

A combination of environmental and human processes were involved in this 'Great Transition', whose full ecological and geographical dimensions are only now coming to light thanks to detailed scientific research into past climates, application of aDNA analysis to the diagnosis of plague and decoding of the Yersinia pestis genome, and emergence of comparative global history as a significant field of scholarly enquiry.

Read Book The Great Transition Climate Disease And Society In The Late Medieval World 2013 Ellen Mcarthur Lectures

Major account of the fourteenth-century crisis which saw a series of famines, revolts and epidemics transform the medieval world.

In the fourteenth century the Old World witnessed a series of profound and abrupt changes in the trajectory of long-established historical trends. Transcontinental networks of exchange fractured and an era of economic contraction and demographic decline dawned from which Latin Christendom would not begin to emerge until its voyages of discovery at the end of the fifteenth century. In a major new study of this 'Great Transition', Bruce Campbell assesses the contributions of commercial recession, war, climate change, and eruption of the Black Death to a far-reaching reversal of fortunes from which no part of Eurasia was spared. The book synthesises a wealth of new historical, palaeo-ecological and biological evidence, including estimates of national income, reconstructions of past climates, and genetic analysis of DNA extracted from the teeth of plague victims, to provide a fresh account of the creation, collapse and realignment of Western Europe's late medieval commercial economy.

#1 NEW YORK TIMES BEST SELLER • In this urgent, authoritative book, Bill Gates sets

out a wide-ranging, practical and accessible plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the

plan he sets out here, it is a goal firmly within our reach.

This series provides texts central to medieval studies courses and focuses upon the diverse cultural, social and political conditions that affected the functioning of all levels of medieval society. Translations are accompanied by introductory and explanatory material and each volume includes a comprehensive guide to the sources' interpretation, including discussion of critical linguistic problems and an assessment of recent research on the topics covered. From 1348 to 1350 Europe was devastated by an epidemic that left between a third and one half of the population dead. This source book traces, through contemporary writings, the calamitous impact of the Black Death in Europe, with a particular emphasis on its spread across England from 1348 to 1349. Rosemary Horrox surveys contemporary attempts to explain the plague, which was universally regarded as an expression of divine vengeance for the sins of humankind. Moralists all had their particular targets for criticism. However, this emphasis on divine chastisement did not preclude attempts to explain the plague in medical or scientific terms. Also, there was a widespread belief that human agencies had been involved, and such scapegoats as foreigners, the poor and Jews were all accused of poisoning wells. The final section

World 2018 Film Market Lectures
of the book charts the social and psychological impact of the plague, and its effect on the late-medieval economy.

In this important study, Trevor Dean examines the history of crime and criminal justice in Italy from the mid-thirteenth to the end of the fifteenth century. The book contains studies of the most frequent types of prosecuted crime such as violence, theft and insult, along with the rarely prosecuted sorcery and sex crimes. Drawing on a diverse and innovative range of sources, including legislation, legal opinions, prosecutions, chronicles and works of fiction, Dean demonstrates how knowledge of the history of criminal justice can illuminate our wider understanding of the Middle Ages. Issues and instruments of criminal justice reflected the structure and operation of state power; they were an essential element in the evolution of cities and they provided raw material for fictions. Furthermore, the study of judicial records provides insight into a wide range of social situations, from domestic violence to the oppression of ethnic minorities.

This illustrated survey examines what it was actually like to live with plague and the threat of plague in late-medieval and early modern England.; Colin Platt's books include "The English Medieval Town", "Medieval

England: A Social History and Archaeology from the Conquest to 1600" and "The Architecture of Medieval Britain: A Social History" which won the Wolfson Prize for 1990. This book is intended for undergraduate/6th form courses on medieval England, option courses on demography, medicine, family and social focus. The "black death" and population decline is central to A-level syllabuses on this period.

Climate Change and the Course of Global History presents the first global study by a historian to fully integrate the earth-system approach of the new climate science with the material history of humanity. Part I argues that geological, environmental, and climatic history explain the pattern and pace of biological and human evolution. Part II explores the environmental circumstances of the rise of agriculture and the state in the Early and Mid-Holocene, and presents an analysis of human health from the Paleolithic through the rise of the state, including the Neolithic Demographic Transition. Part III introduces the problem of economic growth and examines the human condition in the Late Holocene from the Bronze Age through the Black Death, assessing the relationships among human technologies, climatic change, and epidemic disease. Part IV explores the move to modernity, stressing the emerging role of human economic and energy systems as earth-system agents in the Anthropocene.

Read Book The Great Transition Climate Disease And Society In The Late Medieval

Supported by climatic, demographic, and economic data with forty-nine figures and tables custom-made for this book, *A Rough Journey* provides a pathbreaking model for historians of the environment, the world, and science, among many others.

Heresy and inquisition in France, 1200-1300 is an invaluable collection of primary sources in translation, aimed at students and academics alike. It provides a wide array of materials on both heresy (Cathars and Waldensians) and the persecution of heresy in medieval France. The book is divided into eight sections, each devoted to a different genre of source material. It contains substantial material pertaining to the setting up and practice of inquisitions into heretical wickedness, and a large number of translations from the registers of inquisition trials. Each source is introduced fully and is accompanied by references to useful modern commentaries. The study of heresy and inquisition has always aroused considerable scholarly debate; with this book, students and scholars can form their own interpretations of the key issues, from the texts written in the period itself.
