Anaesthesia for Caesarean Section 3 of 10 [Date of Guideline] - OR 5 units of syntocinon and (if required) an infusion of 40 iu syntocinon in 500ml saline over 4 hours via pump (or in 50ml of saline if the patient is preeclamptic and large fluid volumes - need to be avoided).

## ~~Anaesthesia for Caesarean Section — oaa-anaes.ac.uk~~

In this first instalment of a 4-part series on anaesthesia for the Caesarean section we discuss the physiological effects of pregnancy and how those changes can influence our anaesthetic choices. This first part will provide the background for future instalments examining anaesthetic protocol selection, pain management, induction, maintenance, monitoring and recovery for the Caesarean section.

section, total intravenous anaesthesia. Introduction During caesarean section, the anaesthetic technique must provide optimal conditions both for the dam and for the foetus. Unfortunately, all anaesthetics cross the placenta and the foetus blood – brain 281 Veterinary Anaesthesia and Analgesia, 2016, 43, 281 – 290 doi:10.1111/vaa.12298

## ~~Alfaxalone for total intravenous anaesthesia in bitches ...~~

Alfaxalone in combination with alfadolone (Althesin; Glaxo, UK) was used to maintain anaesthesia in 90 women undergoing caesarean section (Gulotta et al. 1980). This steroid anaesthetic had no effect on the Apgar score, uterine tone, maternal – foetal metabolism, cardiocirculatory and respiratory stability.

## ~~Alfaxalone for total intravenous anaesthesia in bitches ...~~

Although total intravenous anaesthesia has advantages for some patients, the commonest technique used for maintenance of anaesthesia in the UK and Ireland remains the administration of an inhaled volatile anaesthetic. However, the use of an inhalational technique is sometimes not possible, and in some situations, inhalational anaesthesia is contraindicated. Therefore, all anaesthetists should be able to deliver total intravenous anaesthesia competently and safely.

## ~~Guidelines for the safe practice of total intravenous ...~~

Key points. Co-administration of propofol and remifentanyl by target-controlled infusion (TCI) is highly effective for obtunding response to noxious stimuli and constitutes ' ideal ' total i.v. anaesthesia (TIVA). Currently, no evidence supports the use of one propofol TCI model over another and all have proved reliable in clinical practice.
